

Altrata wealth & relationship profiles in Copilot — seat-only access and full right-to-be-forgotten.

What it is

Indexes Altrata profiles on individuals, delivered as a licensed **file feed** (not a live API). Access is granted only to licensed seats, and it fully supports data-subject erasure (DSAR). Because it holds personal data, treat every step as compliance-relevant.

Property	Detail
Source	Altrata licensed feed — files dropped (e.g. SFTP), validated by a manifest (SHA-256 + counts)
Connects with	File delivery + manifest verification (no live API)
ACL model	Seat-only : access limited to licensed seats; 'everyone' is forbidden; fails closed
Privacy	PII-safe by construction (identities hashed in logs); dead-letter defaults to redacted
Runtime	Standalone .NET 10 Windows service · 743 automated tests

Signature capabilities

- **DSAR / right-to-be-forgotten**: forget-subject + durable suppression + tamper-evident erasure ledger
- **Purpose-of-use authorization** (PURPOSE_ALLOWLIST): a disallowed purpose is vetoed fail-closed before any billable lookup
- Seat-only entitlement; a change in the seat list triggers re-ACL
- Delta feeds with tombstone withdrawals; manifest count reconciliation
- Dead-letter redaction keeps personal data off disk (replay re-fetches from the feed)

Before setup — key values to request

Request these (see the full guide for the complete checklist)

Value / setting	Ask from
Feed delivery location + credentials (e.g. SFTP) and the manifest spec	Altrata feed provider
The licensed seat list source and its owner	Licensing owner
DPO / compliance sign-off for processing personal data	Data protection officer
Strict file ACLs on the ledger & suppression-list folders	Server / security team

Key signals to monitor

Metric / signal	Healthy looks like
Entitlement / seat-block signal	Blocks are expected for non-seated users; never 'everyone'
Erasure operations + ledger verify status	Ledger verifies OK; erasures complete
Review-queue depth	Low; growth needs attention
altrata_deadletter_depth	Near zero (and redacted)

Top troubleshooting

Symptom	First action
Feed manifest mismatch	Do not ingest a partial feed; re-request the delivery
Seat-file parse failure	Entitlement fails closed by design — fix the file; do NOT bypass the guard
forget-subject fails mid-flight	A compensating withdrawal is dead-lettered; run retry-failed to complete
Ledger verify fails	Tamper = SECURITY incident (escalate); a torn last line = lower-severity — see the guide

forget-subject refuses the --id	Validation refusal (ill-formed or over-long id): nothing was changed. Re-copy the exact id from the feed export and re-run; the message names the offending code unit or the length bound
--	---
